CONTENTS

The Influence of the Decomposition of Organic Matter on the Oxidation-Reduction Potential of Soils. WILLIAM BURROWS AND THEONE C. CORDON 1

The Behavior of Lignin and Humic Acid Preparations Toward a Bromination Treatment. IRVIN C. FEUSTEL AND HORACE G. BYERS 11

Reclamation of Alkali Soils by Electrodialysis. AMAR NATH PURI AND BALMOKAND ANAND 23

The Effect of Calcium Ions and Reaction upon the Solubility of Phosphorus. E. J. BENNE, A. T. PERKINS, AND H. H. KING 29

Estimation of Available Phosphates in Soils by CO_2 Extraction. AMAR NATH PURI AND A. G. ASGHAR 39

Estimating Exchangeable Calcium and Other Cations in Soils. AMAR NATH PURI 47

Root Nodule Bacteria of Some Tropital Leguminous Plants: I. Cross-Inoculation studies with *Vigna sinensis* L. O. N. ALLEN AND ETHEL K. ALLEN 61

Georg Wiegner, 1883–1936 79

Plants in the Sub-family Caesalpinioideae Observed to Be Lacking Nodules. O. N. ALLEN AND ETHEL K. ALLEN 87

Phosphorus Deficiency in Citrus. A. R. C. HAAS 93

Decomposition of Lignin by Microörganisms. SELMAN A. WAKSMAN AND IMRI J. HUTCHINGS 119

A Comparison of the Specific Gravity Balance and the Pipette Methods of Determining Density of Soil Suspensions. N. E. EDLEFSEN AND R. C. COLE 131

Soil Samplers. T. S. COILE 139

Transformation of Nitrate in Water-Logged Soils. PRAN KUMAR DE AND SACHINDRA NATH SARKAR 143

Total Nitrogen as a Factor Influencing Nitrate Accumulation in Soils. P. L. GAINEY 157

Julius Stoklasa, 1860–1936 165

Seasonal Changes of the Moisture Content of Solaga Soil of Palestine and Their Influence on Vegetation. FELIX MENCHIKOVSKY 167

A Green Manure Fertilizer Study on Norfolk Sand. J. E. ADAMS, E. M. ROLLER, AND H. M. BOGGS 175

Phosphorus Nutrition of Citrus and the Beneficial Effect of Aluminum. A. R. C. HAAS 187

Unproductiveness of Certain Orchard Soils as Related to Lead Arsenate Spray Accumulations. S. C. VANDECAVEYE, G. M. HORNER, AND C. M. KEATON 203

The Dilatometer Method as an Indirect Means of Determining the Permanent Wilting Point of Soils. GEORGE JOHN BOUYOUCOS 217

Directions for Making Mechanical Analyses of Soils by the Hydrometer Method. GEORGE JOHN BOUYOUCOS 225

Physiological Studies on Rhizobium: VI. Accessory Factors. D. W. THORNE AND R. H. WALKER 231

Joseph N. Harper, 1874–1936 241

Properties of the Hydroxyl Groups of Clay as a Basis for Characterizing a Mineral Soil. WALTER THOMAS 243

The Applicability of Alkaline Permanganate for Oxidation of Organic Matter in Soils for Mechanical Analysis. JOGENDRA NATH CHAKRABORTY 261

Dispersion of Soil for Mechanical Analysis by Sodium Carbonate or Sodium Oxalate Treatment. AMAR NATH PURI 267
Behavior of Polyvalent Cations in Base Exchange. J. E. GIESEKING AND HANS JENNY .. 273
The Effect of Phosphates on the Cation Exchange Capacity of Certain Soils. A. L. PRINCE AND S. J. TOTH 281
Availability of Soil Phosphates for the Plant from the Viewpoint of Colloid Chemistry. A. TH. TIULIN 291
Physiological Studies on Rhizobium: VII. Some Physiological Effects of Accessory Growth Factors. D. W. THORNE AND R. H. WALKER 301
Book Reviews 311
Base Exchange in Soil Separates and Soil Fractions (Sand and Silt). ALFRED T. PERKINS AND H. H. KING 323
Manganese in New Jersey Soils. A. W. BLAIR AND A. L. PRINCE 327
The Influence of Certain Replaceable Bases in the Soil Upon the Elemental Composition of Vegetable Crops. JACKSON B. HESTER AND FLORENCE A. SHELTON 335
Oxygen and Carbon Dioxide Content of Culture Solutions in Relation to Cation and Anion Nitrogen Absorption by Tomato Plants. L. B. ARRINGTON AND J. W. SHIVE . 341
The Decomposition of Organic Matter in Relation to Soil Fertility in Arid and Semi-Arid Regions. PETRUS C. J. OBERHOLZER 359
On the Formation of Structure in Soil: I. The Structure of Soil Colloids. D. I. SIDERI .. 381
Book Reviews 395
A New Method for Determining the Porosity of the Soil. G. TORSTENSSON AND SIGURD ERIKSSON 405
Available Calcium a Factor in Salt Balance for Vegetable Crops. VICTOR A. TIEDJENS AND L. G. SCHERMERHORN 419
Deficiency Chloroses in Citrus. A. R. C. HAAS 435
The Tolerance of Nitrate by Pure Cultures of Azotobacter. P. L. GAINEY 445
On the Formation of Structure in Soil: II. Synthesis of Aggregates; on the Bonds Uniting Clay with Sand and Clay with Humus. D. I. SIDERI 461
Index 483

PLATES

ROOT NODULE BACTERIA OF SOME TROPICAL LEGUMINOUS PLANTS: I. CROSS-INOCULATION STUDIES WITH *Vigna Sinensis*

Plate 1. Fig. 1. Response of *Enterolobium cyclocarpum* to inoculation 75
2. Nodule formation on *Enterolobium cyclocarpum* inoculated with strain 34–7 75
3. Nodule formation on *Enterolobium cyclocarpum* inoculated with cowpea strain 10 75
4. Nodules from *Acacia horrida* growing in forest soil 75
5. Nodules from *Inga edulis* growing in field soil 75
6. Nodules from *Andira inermis* growing in forest soil 75

Plate 2. Fig. 1. Response of *Erythrina indica* to inoculation 77
2. Nodule formation on *Erythrina indica* inoculated with strain 36-4 77
3. Nodule formation on *Erythrina indica* inoculated with cowpea strain 10 77
4. Nodule formation on the roots of *Cajanus cajan* inoculated with cowpea strain 10 77
5. Nodule formation on the roots of *Cajanus cajan* inoculated with strain 13-5, isolated from a nodule on *Samanea saman* 77

PHOSPHORUS DEFICIENCY IN CITRUS

Plate 1. Fig. 1. Valencia orange leaves from trees grown in sand cultures outdoors in large galvanized iron containers 20 inches in diameter and 24 inches deep. Phosphate was omitted in the culture solution and resulted in the loss of chlorophyll 107
2. Valencia orange leaves from trees in sand cultures that received a culture solution lacking phosphate 107
3. Leaves of lemon cuttings as affected by phosphorus in solution cultures 107
4. Dead areas in leaves of walnut trees (*Juglans regia*) grown in sand cultures that received a culture solution lacking phosphate 107
5. Lisbon lemon leafy-twig cuttings in preliminary sand cultures 107

Plate 2. Transverse Sections of Lisbon Lemon Leaves from Leafy-Twig Cuttings Grown in the Glasshouse 109
Fig. 1. Leaves from cuttings grown in a complete culture solution 109
2. Leaves from cuttings grown in a complete culture solution except that phosphate is omitted 109

Plate 3. Fig. 1. Early symptoms of phosphate deficiency in lemon cuttings 111
2. Recovery of Lisbon lemon leafy-twig cuttings from phosphate deficiency 111

Plate 4. Fig. 1. Valencia orange leafy-twig cuttings and pomelo leafy-twig cuttings grown in a culture solution containing 105 p.p.m. PO_4 beginning on January 8, 1933 113
2. Valencia orange leafy-twig cuttings as scions on Rough lemon leafy-twig cuttings as stocks 113
3. Valencia orange leafy-twig cutting as the scion on Rough lemon leafy-twig cutting as the stock 113

Plate 5. Fig. 1. Pomelo leafy-twig cuttings grown in a culture solution containing 105 p.p.m. PO_4 115
2. Advanced stages of phosphorus deficiency in pomelo leafy-twig cuttings as scions on Eureka lemon leafy-twig cuttings as stocks 115
Plate 6. Fig. 1. Effect of phosphate on the root growth of lemon leafy-twig cuttings grown from July 16, 1932, until September 13, 1933, in nonaerated culture solution containing 105 p.p.m. phosphate 117
2. Effect of silica in the absence of phosphate on the growth of Lisbon lemon leafy-twig cuttings 117

A Comparison of the Specific Gravity Balance and the Pipette Methods of Determining Density of Soil Suspensions

Plate 1. Specific Gravity Balance Used in Making Soil Suspension Density Determinations 137

A Green Manure Fertilizer Study on Norfolk Sand

Plate 1. Fig. 1. Cotton in green manure fertilizer experiment 1933 185
2. Corn in green manure fertilizer experiment 1933 185

Phosphorus Nutrition of Citrus and the Beneficial Effect of Aluminum

Plate 1. Effect of Aluminum and Phosphate on Growth of Lemon Plants 199
Fig. 1. Aluminate as a better source of calcium than citrate for the growth of lemon seedlings in 2-quart Mason jars filled with nonaerated culture solution containing phosphate 199
2. Lisbon lemon leafy-twig cuttings grown in nonaerated culture solutions with aluminum 199
3. Lisbon lemon leafy-twig cuttings grown in nonaerated culture solutions with aluminum 199
4. Eureka lemon leafy-twig cuttings grown in nonaerated cultures from April 11 to December 26, 1933, in enameled pails of 9-liter capacity .. 199
Plate 2. Effect of Aluminum and Phosphate on Growth of Lemon and Orange Plants. 201
Fig. 1. Root caps on the roots of lemon cuttings grown in a culture solution containing no phosphate and to which 5 to 10 p.p.m. of aluminum was added as the nitrate 201
2. Beneficial effect of aluminum on the growth of Valencia orange leafy-twig cuttings in culture solutions containing 105 p.p.m. phosphate for a few days at intervals of several weeks 201
3. Effect of continuous and intermittent phosphate in the culture solution on the growth of lemon leafy-twig cuttings in aluminum containers 201

Unproductiveness of Certain Orchard Soils as Related to Lead Arsenate Spray Accumulations

Plate 1. Effect of Different Concentrations of Lead Arsenate, Arsenious Acid, and Lead Nitrate on Barley Plants 215

The Dilatometer Method as an Indirect Means of Determining the Permanent Wilting Point of Soils

Plate 1. Dilatometer Used in Determining the Wilting Point of Soils 223

DIRECTIONS FOR MAKING MECHANICAL ANALYSES OF SOILS BY THE HYDROMETER METHOD

Plate 1. Improved Dispersing Machine, Hydrometer, Cup, and Cylinder, Used in the Hydrometer Method For Making Mechanical Analyses of Soils..... 229

OXYGEN AND CARBON DIOXIDE CONTENT OF CULTURE SOLUTIONS IN RELATION TO CATION AND ANION NITROGEN ABSORPTION BY TOMATO PLANTS

Plate 1. Effect of Continuous Aeration of Culture Solution on Growth of Tomato Plants..... 357

ON THE FORMATION OF STRUCTURE IN SOIL: I. THE STRUCTURE OF SOIL COLLOIDS

Plate 1. Microphotographs of Clays, Humates, and Fine Sand..... 393
Fig. 1. Clay "Toida."..... 393
2. Clay "Toida" in highly swollen condition..... 393
3. Cover clay "Makshany" in highly swollen condition..... 393
4. Peat humate..... 393
5. Dung humate..... 393
6. Peat humate. "Figures of cracking" and spherulites..... 393
7. Humate from autolysis products of *Aspergillus niger*..... 393
8. Another position of the preparation shown in figure 7..... 393
9. Another position of the preparation shown in figure 7..... 393
10. Rows of "gathered" sand..... 393

A NEW METHOD FOR DETERMINING THE POROSITY OF THE SOIL

Plate 1. The Porosimeter..... 417

DEFICIENCY CHLOROSES IN CITRUS

Plate 1. Fig. 1. Root system of a Valencia orange tree grown in pure silica sand in a glazed earthenware crock of 12-gallon capacity..... 439
2. Growth of a budded Valencia orange tree in an aerated solution culture in which phosphate was present for only a few days prior to the renewal of the solution and in which 5 to 10 p.p.m. of aluminum was present when phosphate was absent..... 439
Plate 2. Fig. 1. Chlorosis as a result of manganese deficiency in Valencia orange leaves..... 441
2. Chlorosis in Valencia orange leaves from trees grown in pure silica sand to which was applied a culture solution lacking sulfate..... 441
Plate 3. Fig. 1. Chlorosis of Valencia orange leaves obtained from trees grown in pure silica sand to which a culture solution lacking magnesium was applied..... 443
2. Chlorosis of Valencia orange leaves obtained from trees in the field field in locations close to the irrigation line..... 443

ON THE FORMATION OF STRUCTURE IN SOIL: II. SYHTHESIS OF AGGREGATES; ON THE BONDS UNITING CLAY WITH SAND AND CLAY WITH HUMUS

Plate 2. Microphotographs of Clay-Sand and Humus-Clay Mixtures..... 481
Fig. 1. Clay-sand mixture in polarized light..... 481
2. Humus-clay mixture. Dendrites..... 481
3. Another position of the preparation shown in figure 2..... 481
4. Another position of the preparation shown in figure 2..... 481
5. Humus-clay mixture. Non-homogeneous structure..... 481

6. Humus-clay mixture. Fluidal structure 481
7. Clay "Toida." Swelling in humus 481
8. The preparation shown in figure 7 in polarized light 481
9. Structure of "inseparable" humus-clay precipitate 481
10. The preparation shown in figure 9 in polarized light 481
11. Artificial mixture of humus with clay 481

TEXT-FIGURES

The Influence of the Decomposition of Organic Matter on the Oxidation-Reduction Potential of Soils

Fig. 1. Effect of the Addition of Nitrogenous and Carbohydrate Materials on the Potentials Developed in Soil 3
2. Effect of the Addition of Complex Organic Matter on the Potential of Soil 3
3. Effect of Moisture on the Potential of Standing Soil 4
4. Sand Medium with a Carbohydrate Base 4
5. Sand Medium with a Protein Base 5

Reclamation of Alkali Soils by Electrodialysis

Fig. 1. Electro-Reclamation of Soil—Plan of Field Experiment II 26

The Effect of Calcium Ions and Reaction upon the Solubility of Phosphorus

Fig. 1. Effect of Increasing Amounts of Calcium Ion, Added in Different Compounds, upon the Solubility of Phosphorus in a Dilute Solution of H_3PO_4 34
2. Effect of Calcium Ion, Added in Different Compounds, upon the Solubility of Phosphorus in a Dilute Solution of H_3PO_4 as the pH is Varied by the Calcium Compound Itself or by the Addition of Acids or Bases 34
3. Effect of a Constant Amount of Soil Saturated with Calcium upon the Solubility of Phosphorus in a dilute Solution of H_3PO_4 when the pH of the System is Changed by HCl or Various Bases 34

Estimation of Available Phosphates in Soils by CO_2 Extraction

Fig. 1. Diagram of the U-Tube for the Extraction of Phosphates by Carbon Dioxide ... 40

Soil Samplers

Fig. 1. Sampler for Obtaining Undisturbed Soil for Determining Volume-Weight, Air Space, and Water-Holding Capacity 140
2. Sampler for Obtaining Undisturbed Soil for Determining the Permanent Wilting Percentage 141

Seasonal Changes of the Moisture Content of Solaga Soil of Palestine and Their Influence on Vegetation

Fig. 1. Annual Courses of the Moisture Content of Different Layers of Solaga Soil 168
2. Concentrations of Soluble Salts in Different Layers of Solaga Soil 170
3. Seasonal Changes of the Wild Vegetation of Palestine 172

A Green Manure Fertilizer Study on Norfolk Sand

Fig. 1. Sandhill Section of North Carolina, South Carolina, and Georgia, Lying Between the Piedmont and Atlantic Coastal Plains Belts 176
2. Change in Carbon-Nitrogen Ratios for Average of All Plats of the 6–8–4 and Stubble Series vs. 2–8–4 and Green Manuring Series, for Original Samples of May, 1928, to Samples of March, 1934 180

3. Nitrate Nitrogen in Soil of 6–8–4 and Stubble Plats vs. 2–8–4 and Green Manure Plats During 1933 181
4. Relation of Yields of Corn and Cotton to Residual Total Carbon Content of Plats, When Grown on Legume Stubble and Supplemented with 6–8–4 Fertilizer, as Compared with Legumes Turned as Green Manure and Fertilized with 2–8–4 182

PHYSIOLOGICAL STUDIES ON RHIZOBIUM: VI. ACCESSORY FACTORS

Fig. 1. Growth of *Rhizobium trifolii* in Media Containing Ferrous and Ferric Iron in Different Concentrations 237

PROPERTIES OF THE HYDROXYL GROUPS OF CLAY AS A BASIS FOR CHARACTERIZING A MINERAL SOIL

Fig. 1. The "Original" Soil Treated with Solutions of 0.1 *N* HCl and of 0.1 *N* $Ba(OH)_2$ .. 249
2. The "Check" Soil Treated with Solutions of 0.1 *N* HCl and of 0.1 *N* $Ba(OH)_2$ .. 250
3. The "NPK" Soil Treated with Solutions of 0.1 *N* HCl and of 0.1 *N* $Ba(OH)_2$ 251

BEHAVIOR OF POLYVALENT CATIONS IN BASE EXCHANGE

Fig. 1. Exchange Adsorption of Monovalent Cations by Ca-Clay 277
2. Exchange Adsorption of Divalent and Tetravalent Cations by NH_4-Clay 277
3. Adsorption of Divalent Ions by Two NH_4-Permutites 278
4. Release of Divalent Ions (Mg-Clay, Ca-Clay, Etc.) by Mono- and Divalent Cations 278
5. Exchange Intensities Plotted as a Function of the Radii of the Adsorbed Ions .. 279
6. Effect of Electric Charge of Ions on the Adsorption Intensity 279
7. Release of Adsorbed Mono- and Polyvalent Cations by KCl 279

PHYSIOLOGICAL STUDIES ON RHIZOBIUM: VII. SOME PHYSIOLOGICAL EFFECTS OF ACCESSORY GROWTH FACTORS

Fig. 1. Oxygen Consumed by *Rhizobium meliloti* in a Nitrate-Medium with and without Glucose and Agar Present 308
2. The Respiratory Quotients of *Rhizobium meliloti* for Consecutive 2-Hour Intervals While Growing in a Glucose-Nitrate Medium with and without Agar Present ... 308

THE DECOMPOSITION OF ORGANIC MATTER IN RELATION TO SOIL FERTILITY IN ARID AND SEMI-ARID REGIONS

Fig. 1. Rate of Decomposition of Alfalfa, Hegari, and Manure in the Soil as Measured by CO_2 Production 364
2. Rate of Decomposition of Glucose, Starch, Cellulose, and Lignin in the Soil as Measured by CO_2 Production 365
3. Influence of Moisture on the Decomposition of Alfalfa in the Soil as Measured by CO_2 Production 367
4. Influence of Temperature on the Decomposition of Alfalfa in the Soil as Measured by CO_2 Production 368
5. Decomposition of Various Chemical Constituents of Manure when Inoculated with a 1 Per Cent Suspension of Gila Fine Sandy Loam 370
6. Decomposition of Various Chemical Constituents of Alfalfa when Inoculated with a 1 Per Cent Suspension of Gila Fine Sandy Loam 370
7. Decomposition of Various Chemical Constituents of Hegari Sorghum when Inoculated with a 1 Per Cent Suspension of Gila Fine Sandy Loam 371

8. Decomposition of Various Chemical Constituents of Alfalfa in the Presence of Gila Fine Sandy Loam 372
9. Decomposition of Various Chemical Constituents of Alfalfa in the Presence of Tubac Clay Loam 372

A New Method for Determining the Porosity of the Soil

Fig. 1. Diagram of the Porosimeter 406

Available Calcium a Factor in Salt Balance for Vegetable Crops

Fig. 1. Effect of Different Ratios of Calcium to Sodium on Dry Matter, Organic Nitrogen, and Carbohydrate Fractions in Tomato 430
